2. unique.py (30 points)

Write a program that opens a specified text file (text2) then display a list of all unique words found in the file.

HINTS:

Define main():

Declare Local variables

Open file text2.txt for reading. Use **'text2.txt'** file **attached under module**.

User the set method to find the unique words in the file and store each of them as an element of the set.

Close the file.

Sample output:

These are the unique words in the text:
management.
name
been
later,
canceled,
is
Eastern,
delay
Eight
1,820
at
it
1867
official
world
and
company,....
